HOSE MARKERS

for demanding applications:

clear identification, easy to equip!

Born in Agriculture.
Proven Across Industries!

caplugs

Outback Wrap hydraulic hose markers help to quickly and safely identify hydraulic and other hose lines. The system is color- and number-coded, tool-free to install, and designed for demanding field use and can be used on any hose from ¼" (DN6) to 1-1/2" (DN38)

Typical Applications

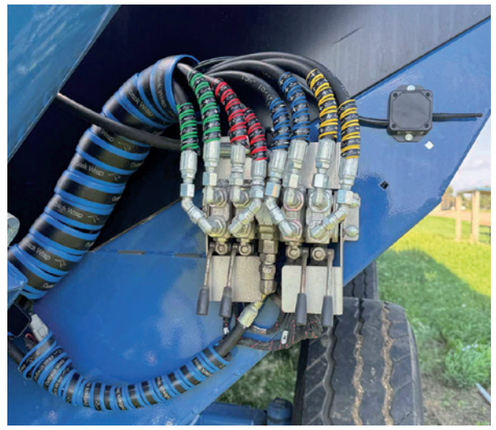

- Tractors with rear control valves and front loaders. (Any brand)
- Implements with multiple hydraulic functions such as tipping, lifting, grabbing, or cutting.
- Operations with frequent changes and high coupling frequency.
- Workshops, contractors, and machinery rings with standardized fleets.

Product Features

- Color- and number-coded marking for clear visibility.
- ISO-oriented color logic for common hydraulic identification.
- Different lengths for additional visual distinction of A/B and +/- lines.
- Tool-free installation and removing anytime directly on the hose.
- Built for harsh conditions: temperature-resistant and color-stable for everyday use due to bi-color extruded HDPE with laser marking.
- Easy Cleaning with any solvent or soap

Customer Value

- One consistent standard for the entire machine fleet.
- Faster coupling thanks to clear color and number coding.
- Fewer connection errors with changing operators.
- Clear identification of pressure, return, and positive/negative lines.
- More output through reduced setup and search time.
